(CSEC)

Hands-on Training Sessions - 2025

Explore - Learn - Invent !

At CSEC, we aim to ignite children's curiosity and to strengthen their critical thinking skills through a hands-on, experimental learning approach. Our science activities are aligned with the school curriculum, however, we deliver them in an engaging and exploratory format. Students participate in interactive experiments, live demonstrations, and do-it-yourself model-making and also spend time with nature to foster real-world connections. Additionally, they work with advanced scientific equipments and specialized kits available at our center providing a stimulating environment that encourages inquiry, innovation, and a deeper understanding of scientific concepts.

Based on SSC, CBSE & ICSE syllabus
